

### ***Lighthouse Park***

- BMA is still in the design phase process of the project. Working towards having some final design options for City Council to review.

### ***Point Park***

- Task Order was approved by City Council to start pier improvements and installation of pervious concrete pavement in parking bays.
- Compton Engineering has started on the permitting process. Obtaining the permits will take a few months.

### ***River Park***

- Geotechnical sub-consultant will be on site in the next couple of weeks to perform soil borings at the revised roadway location to determine existing soil types and what soils will be needed to be brought to the site to build the new roadway. Neel-Schaffer is continuing with the design and permitting.
- Planning on putting two separate bid packages together. One will be for paving and signage on the existing route and the other will be for the access off Highway 90 to the park. The paving and signage work can be done during the permitting process for new access. However, there is possible permitting needed from MDOT and the railroad for the paving and signage project.

### ***IG Levy South***

- Park Signs to be replaced
